

ABSTRACT OF THE DISCLOSURE

A shoe having a fabric outsole and method for manufacturing are disclosed. In described embodiments, a shoe outsole with a bottom surface wherein an adhesive is applied to at least a portion of the bottom surface of the shoe outsole and a plurality of fibers are embedded within the adhesive. In the described method embodiment, once the adhesive is applied to the outsole, fibers are sifted down through an electro-static field onto the adhesive. Once sufficient fibers have been embedded, the adhesive is cured and then cooled.
